

# Extra Virgin Olive Oil Body Soap Rosemary

## Rosemary Body Soap

Fresh rosemary was hand picked and hung to dry for ten days before de-stemming and grinding. The rosemary was then steeped in distilled water and used to saponify the oils prior to adding the rosemary essential oil and ground herbs. The soap was poured into molds and insulated for 3 days. The bars were cut seven days after being removed from the mold and allowed to cure for four weeks to harden.

"Rosemary is high in camphor and is traditionally used in decongestant blends and pain (muscle) relief blends (think 'Vicks Vapor Rub'). This distinctive smelling essential oil is considered stimulating in nature and is often found in energizing blends."
